

Special Issue Composites and Polymers

Call for Papers

Composites and Polymers research involves the study and development of materials consisting of two or more distinct components, typically a polymer matrix and a reinforcement material. The aim is to create materials with enhanced properties and performance compared to their individual constituents. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Composites and Polymers**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Composites and Polymers**. In this special issue, potential topics include, but are not limited to:

- Molecular arrangement of polymers
- The structure of polymers
- Characteristics of polymers
- Friction and wear of polymer composites
- Fiber-reinforced polymer composites
- Polymer nanocomposites
- Advanced polymer materials
- Polymer characterization techniques
- Polymer processing and morphology
- Polymer synthesis and modification
- Interfacial interactions in composites
- Structural and mechanical characterization
- Polymer composites: Preparation, characterization, and application

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Composites and Polymers**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	March 19th, 2024
Publication Date	May 2024

Scientific Research
Open Access

**Journal of Materials Science and
Chemical Engineering**
ISSN Online:2327-6053
