

Special Issue on Sensor Technology

Call for Papers

A sensor is a device used to measure a property, such as pressure, position, temperature, or acceleration, and respond with feedback. Technological progress allows more and more sensors to be manufactured on a microscopic scale as microsensors using MEMS technology. In most cases, a microsensor reaches a significantly faster measurement time and higher sensitivity compared with macroscopic approaches. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Sensor Technology**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Sensor Technology**. In this special issue, potential topics include, but are not limited to:

- Physical sensors
- Chemical sensors
- Biosensors
- Remote sensors
- Sensor networks
- Smart/Intelligent sensors
- Sensor technology and application

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Sensor Technology**” should be selected during your submission.

Special Issue timetable:

| | |
|---------------------|----------------------|
| Submission Deadline | September 30th, 2022 |
| Publication Date | November 2022 |
