

Special Issue on Advances in Parasitology

Call for Papers

Parasitology is the study of parasites, their hosts, and the relationship between them. As a biological discipline, the scope of parasitology is not determined by the organism or environment in question but by their way of life. This means it forms a synthesis of other disciplines, and draws on techniques from fields such as cell biology, bioinformatics, biochemistry, molecular biology, immunology, genetics, evolution and ecology.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **Advances in Parasitology**. Potential topics include, but are not limited to:

- Molecular & cellular parasitology
- Biology of parasites
- Parasite immunology
- Ecological study and diversity
- Parasite evolution
- Environmental parasitology
- Host-parasite relationships
- Parasitic infections
- Leishmania parasites
- Parasitology & public health
- Veterinary parasitology

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Advances in Parasitology**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	August 24th, 2021
Publication Date	October 2021
