## Special Issue on Civil and Environmental Engineering

### Call for Papers

Civil engineering is a general term for the science and technology of constructing various types of land engineering facilities. It refers to the applied materials, equipment and technical activities such as survey, design, construction, maintenance and repair, as well as the objects of engineering construction. The purpose of civil engineering is to form spaces and passages that are required by human production or life with good functions, comfort and aesthetics. It is both a material-level need and a spiritual need. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Civil and Environmental Engineering**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Civil and Environmental Engineering**. Potential topics include, but are not limited to:

- Sustainable construction
- Environmental highway construction
- Seismic performance of buildings
- Wind loading of buildings
- Energy efficiency in buildings
- Transportation engineering
- Civil engineering systems
- Civil engineering and management

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Civil and Environmental Engineering**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	October 27th, 2020
Publication Date	December 2020

**Guest Editor:**
