

## Special Issue on Composite Materials and Applications

### Call for Papers

A composite material is a material that is produced from two or more constituent materials with different physical and chemical properties. When combined, it may become stronger, lighter or resistant to electricity. The composite materials have specific properties to accomplish a certain job, which outweigh their base materials and are applicable in many situations. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of Composite Materials and Applications.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Composite Materials and Applications**. Potential topics include, but are not limited to:

- Carbon composites
- Ceramic matrix composites
- Composite wood
- Fibers
- Fibreglass
- Graphene
- Metal matrix composites
- Nanocomposites
- Reinforced concretes
- Syntactic foams
- Thermoplastic composites
- Wood-plastic composites
- Smart materials and structures
- Fabrication methods
- Physical properties
- Chemical properties
- Mechanical properties

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Composite Materials and Applications**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	June 30th, 2022
Publication Date	August 2022

**Guest Editor:**
