

Special Issue on Discrete Mathematics: Analysis and Applications

Call for Papers

Discrete mathematics is the study of mathematical structures that are countable or different and separable. Examples of discrete structures are combinations, graphics, and logical sentences. Discrete mathematics is widely used in various fields, especially in computer science and technology. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Discrete Mathematics: Analysis and Applications**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Discrete Mathematics: Analysis and Applications**. Potential topics include, but are not limited to:

- Discrete analysis method
- Discrete structures
- Measures of dispersion
- Discrete dynamical systems
- Discrete modelling
- Discrete time
- Hybrid discrete and continuous mathematics
- Discrete geometry and computational geometry
- Discrete probability
- Applications

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Discrete Mathematics: Analysis and Applications**” should be selected during your submission.

Special Issue Timetable:
