

## Special Issue on Fluid Mechanics

### Call for Papers

Fluid mechanics involves the study of fluids and the forces on them. Fluid mechanics can be divided into fluid statics, the study of fluids at rest; and fluid dynamics, the study of the effect of forces on fluid motion. Fluid mechanics, especially fluid dynamics, is an active field of research with many problems that are partly or wholly unsolved. Fluid mechanics can be mathematically complex, and can best be solved by numerical methods, typically using computers. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **fluid mechanics**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **fluid mechanics**. In this special issue, potential topics include, but are not limited to:

- The theory of fluid mechanics
- Biological fluid mechanics
- Micro fluid mechanics
- The experiment of fluid mechanics
- Rotation and stratified fluid mechanics
- Non-newtonian fluid mechanics
- Seepage mechanics
- Applications of fluid mechanics

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Fluid Mechanics**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	May 28th, 2020
Publication Date	July 2020
