Special Issue on Thermal-Fluid Sciences

Call for Papers

Thermal-Fluids Sciences involves the application of experimental techniques and mathematical methods based on principles from physics, fluid and gas dynamics, and heat transfer to the development and operation of energy conversion systems, such as solar panels, wind turbines, and internal combustion engines. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Thermal-Fluid Sciences**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Thermal-Fluid Sciences**. In this special issue, potential topics include, but are not limited to:

- Heat transfer and fluid mechanics
- Micro/nano-scale fluidics and energy transport
- Computational fluid-thermal systems
- Heat and mass transport processes
- Hydrodynamic stability theory
- Fluid-structure interaction problems
- Applications of thermal-fluid sciences in engneering

Authors should read over the journal's For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's Paper Submission System.

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue - *Thermal-Fluid Sciences***" should be selected during your submission.

Special Issue timetable:

Submission Deadline	March 18th, 2021
Publication Date	May 2021
