

Special Issue on Neuroimaging

Call for Papers

Neuroimaging refers to utilizing a variety of techniques to directly or indirectly image the structure and function of the nervous system. With the development of neuroimaging, including CT, MRI, DSA, PET and other brain imaging techniques, it provides detailed information about neurological lesions and the structure of the surrounding normal tissues. Thus neurosurgeons can make topical diagnosis and pathological diagnosis to improve the preoperative treatment plan for each patient.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **neuroimaging**. Potential topics include, but are not limited to:

- Functional magnetic resonance imaging
- Magnetoencephalography
- Positron emission tomography
- Computed tomography
- Electroencephalography
- Magnetic resonance imaging

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Neuroimaging**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	January 23rd, 2018
Publication Date	April 2018
