Special Issue on Nursing Information Systems

Call for Papers

Health care is delivered in dynamic, complex, and ever changing environments. Changes in medical treatments, regulations for federal and state reimbursement and public knowledge about making individual and collective health care choices create growing demands for information. To respond proactively for these changes and the growing demands for clinical information, computer systems are being devised to collect, store, retrieve, analyze and communicate health status and health care information. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of Nursing Information Systems.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore Nursing Information Systems. In this special issue, potential topics include, but are not limited to:

- Patient charting
- Staff schedules
- Nursing clinical record
- Care evaluation; Discharge planning
- Workload assessment (prospective and or retrospective)
- Personnel management; Staff rostering
- Attendance recording; Skill mix management
- Provide a clinically useful person-based record
- Track people across providers
- Support contracting for packages of care
- Support quality monitoring
- Application of intelligent nursing information system in emergency nursing management

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue –Nursing Information Systems” should be selected during your submission.
