

Special Issue on Statistical Methods and Analysis

Call for Papers

Mathematical concepts, formulas, models, techniques used in statistical analysis of random data. In comparison, deterministic methods are used where the data is easily reproducible or where its behavior is determined entirely by its initial stage and inputs. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **statistical methods and analysis**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **statistical methods and analysis**. In this special issue, potential topics include, but are not limited to:

- Basic statistical tools
- Regression analysis
- Sample size determination
- Design of physical and simulation experiments
- Statistical modeling and analysis
- Statistical methods for the design and analysis of computer simulation experiments

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Statistical Methods and Analysis**” should be chosen during your submission.

According to the following timetable:

| | |
|---------------------|---------------------|
| Submission Deadline | November 29th, 2023 |
| Publication Date | January 2024 |
