"Social Psychology" is an academic discipline that explores how individuals' thoughts, feelings, and behaviors are influenced by the presence or imagined presence of others. It focuses on understanding the impact of social interactions, group dynamics, and societal factors on human behavior, attitudes, and beliefs. One key aspect of social psychology is understanding how people perceive and interpret social situations and how this influences their behavior. It examines how social influences and norms guide individuals' decision-making processes, shaping their attitudes and beliefs. Social psychologists also study how individuals form impressions of others, how stereotypes and biases affect interpersonal interactions, and how people navigate their social identities within different groups and cultures. Additionally, social psychology explores the impact of social interactions on individuals' emotions, self-esteem, and well-being. It examines how individuals are influenced by others' opinions and judgments, how they conform to group norms, and how they can be persuaded or influenced by various social factors. Social psychologists not only seek to understand human behavior and cognition but also aim to apply their findings to real-world contexts. They investigate how social psychology principles can be employed to address social issues, promote positive behavior change, improve intergroup relations, and enhance social well-being.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on Social Psychology. Potential topics include, but are not limited to:

- Social perception, cognition and behavior
- Attitudes and behavior
- Group dynamics
- Interpersonal relationships
- Stereotypes and discrimination
- Prosocial behavior and altruism
- Aggression and violence
- Social influence and norms
- Social identity and self-concept
- Cultural and cross-cultural psychology
- Emotion and social psychology
- Social neuroscience
- Socialization and developmental psychology
- Social media and online behavior
- Applied social psychology
Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue – Social Psychology” should be chosen during your submission.

According to the following timetable:

<table>
