

Special Issue on Welding and Cutting Technology

Call for Papers

Welding involves joining two or more pieces of metal or thermoplastics together to form a single piece. Unlike welding processes which join two pieces of materials, cutting technology involve separating or severing a piece of metal through intense heat generated to melt the metal. Different materials require different welding and cutting processes.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **welding and cutting technology**. Potential topics include, but are not limited to:

- Welding and cutting processes
- Welding and cutting equipment
- Welding materials
- Quality assurance of welding and cutting
- Safety technique
- Development trend of welding and cutting technology

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Welding and Cutting Technology**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	November 29th, 2016
Publication Date	January 2017
