

Special Issue on Intelligent Robot and Its Applications

Call for Papers

Artificial Intelligence (AI) is a general term that implies the use of a computer to model and/or replicate intelligent behavior. Research in AI focuses on the development and analysis of algorithms that learn and/or perform intelligent behavior with minimal human intervention. These techniques have been and continue to be applied to a broad range of problems that arise in robotics, e-commerce, medical diagnosis, gaming, mathematics, and military planning and logistics, to name a few. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Intelligent Robot and Its Applications**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Intelligent Robot and Its Applications**. In this special issue, potential topics include, but are not limited to:

- Intelligent robot
- Pattern recognition and intelligent systems
- Robot control system
- Robot kinematics
- Robot dynamics
- Intelligent robot control
- Mobile robot control technology

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Intelligent Robot and Its Applications**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	March 14th 2024
Publication Date	May 2024
