

Special Issue on Petroleum and Oilfield Engineering

Call for Papers

Petroleum engineering is primarily concerned with the economic extraction of oil, gas and other natural resources from the earth. This is accomplished through the design, drilling and operation of wells and well systems, and the integrated management of the underground reservoirs in which the resources are found. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Petroleum and Oilfield Engineering**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Petroleum and Oilfield Engineering**. In this special issue, potential topics include, but are not limited to:

- Petroleum geostatistics
- Field development and production
- Petroleum geology
- Well drilling technology
- Evaluate potential oil and gas reservoirs
- Oversee drilling activities
- Oilfield chemistry
- Design surface collection and treatment facilities
- Oil and gas storage and transportation
- Resource evaluation and prediction

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Petroleum and Oilfield Engineering**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	May 11th 2024
Publication Date	July 2024
